

The do file `mto_final_analysis_code.do` produces all of the tables and figures for Chetty, Hendren, and Katz (AER 2015).

This program starts from MTO data obtained from HUD and a dataset constructed from tax records containing earnings and other information for these individuals by upstream SAS code (not included here).

The data themselves are confidential, so the results can only be reproduced by obtaining access to the MTO data from HUD and obtaining permission to analyze these data at the IRS.
